

MINI

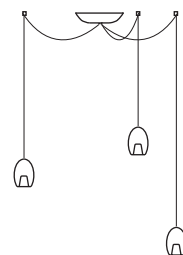

Rosone che contiene il trasformatore e al quale si possono sospendere, con il proprio cavo di alimentazione a treccina da 1 a 3 corpi illuminanti. Nel caso in cui il punto luce sia decentrato rispetto alla zona da illuminare i corpi illuminanti possono essere posizionati esattamente dove occorrono tramite un nottolino da fissare al plafone. I corpi illuminanti sono a scelta tra quelli della collezione a 12V.

Rose which holds the transformer and to which it is possible to suspend 1, 2 or 3 lighting bodies by means of their own power cable. If the lighting point is not centred according to the place you need to light, it is possible to use a ceiling fixed nipple to hang the lighting body exactly where it is needed. Choose the lighting bodies from our 12V collection.
